Different browsers.

A browser is the app you use to go onto the internet and view websites. On iPhones, Safari is usually used, while Google Chrome is also available. Using a browser, you can search for anything that interests you, read news, view maps, watch videos, or shop online. It is like a gateway that takes you anywhere on the internet through your mobile phone.

Safari.

Safari is the browser that comes pre-installed on every iPhone. It lets you browse the internet, search for information, and visit websites without needing to download anything extra.

Safari.

Refreshing a page in Safari.

Refreshing a page means that the browser reloads the website from the beginning and requests its data again. We use this when a page freezes, when we want updated content, or when some parts have not loaded correctly.

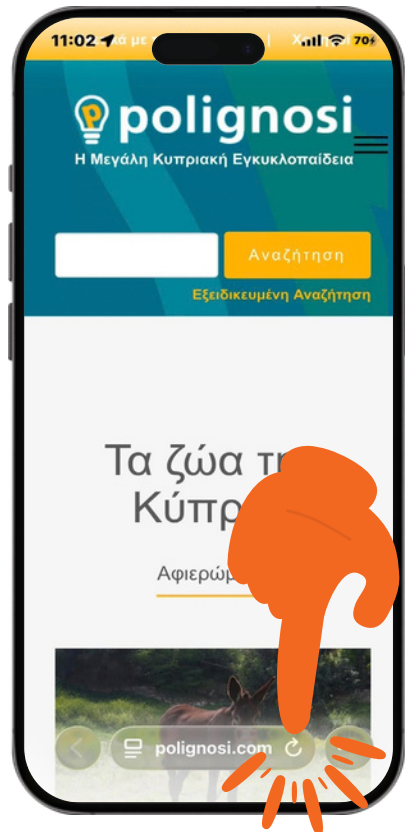

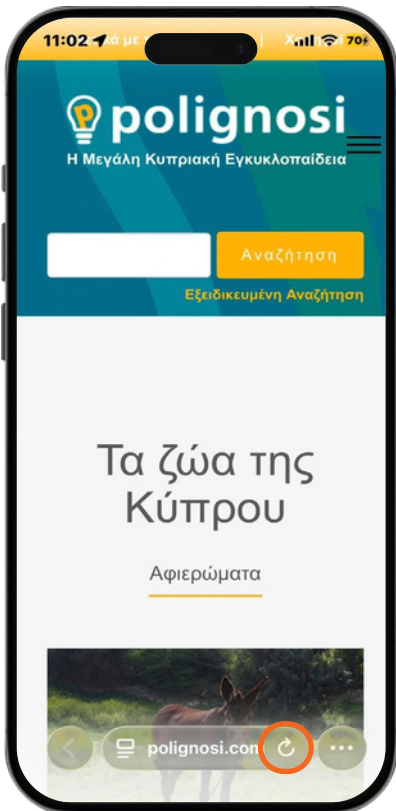

How to refresh a page.

1. Find the refresh icon

Next to the address bar, there is a small circular arrow, which is the refresh button.

2. Tap the refresh icon

Simply tap this circular arrow, and the page will reload from the beginning.

Safari.

How to refresh a page.

3. Alternatively, swipe down

Pulling the page down from the top also causes an automatic refresh.
