

Phone / Contacts / Messages.

Phone, Contacts, and Messages are three of the most basic apps on your phone. They allow you to call, save numbers, and send text messages (SMS). They always work, even when you don't have an internet connection, as long as you have signal from your mobile carrier. The three apps are connected to each other, so you never need to remember numbers by heart.

Phone / Contacts / Messages.

How to send messages.

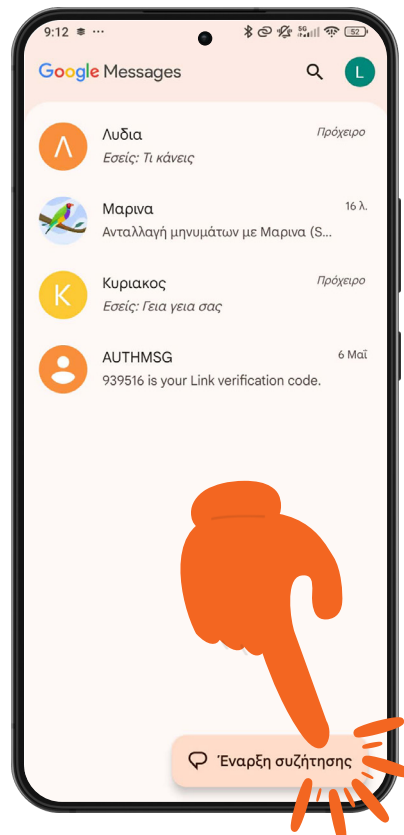

1. Open Messages

Open the
“Messages” app.

2. Start a new message

Tap the icon for a
new message.
