

Phone / Contacts / Messages.

Phone, Contacts, and Messages are three of the most basic apps on your phone. They allow you to call, save numbers, and send text messages (SMS). They always work, even when you don't have an internet connection, as long as you have signal from your mobile carrier. The three apps are connected to each other, so you never need to remember numbers by heart.

How to save a new contact.

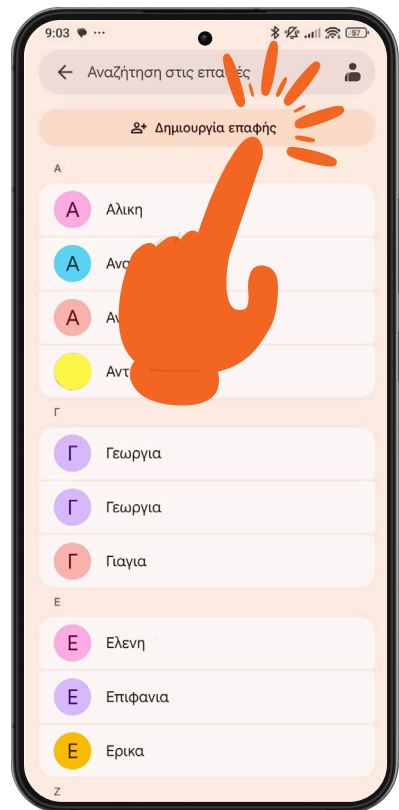

1. Open Contacts

Open the “Phone” app and tap “Contacts”.

2. Create a new contact

Tap “Create contact”.

How to save a new contact.

3. Fill in the details

Tap “First Name” and “Last Name” and fill them in, then tap the green button next to “Add phone number” and enter the number.

4. Save

Once you’ve finished filling everything in, tap the blue checkmark in the top right to save the contact.
